INTRODUCTION

Rural Industrialization is a way to empower villages leading to all-round development of that area and its people, by setting up of small, medium and large scale enterprises in rural areas. There are certain parameters that need consideration before setting up an enterprise. For example, locally available raw materials, their utilization potential and their market demand should be considered before setting up an industry. However, industrial growth should not compromise on sustainability of the environment. Sustainable growth includes simultaneous improvement of society not only from economic and social prospective but also from environmental prospective. There are certain challenges to achieve the target of rural industrialization along with sustainability. Human behaviour is the most critical parameter for the success of any nation. Thus people should be trained through skill development programmes and awareness should be generated about industrialization, economic growth and sustainability index. Therefore, the present course provides an overview of establishment of rural industries, Sustainability of environment and various challenges associated with the same.

AIM

This programme aims to bring together the faculties from various institutions who are involved in teaching and research in rural industrialization to generate awareness, popularize and promote its development. It will be a great opportunity and platform for the participants to explore the rural industries establishment and sustainability. The course aims towards preparing the roadmap for establishment of rural industries, understanding the challenges at all levels from establishment to scaling up for rural industries and developing skills for management for rural resources for industrial development.

OBJECTIVES

- To understand the potential challenges in establishment of rural industries.
- Resource availability and management to mitigate the challenges for rural industries.
- To develop skills for management for rural resources for industries development.

PARTICIPATION

Indian Institute of Technology, Delhi has great pleasure in inviting faculty members involved in rural industrialization specialisation who comes under TEQIP III centres IIT Delhi zone. There is no registration fees for teachers of approved TEQIP Institutes from focus states under IIT Delhi's Quality Circle. All Candidates are requested to attach one page write up indicating their specific interest in a particular area. However, priority will be given to participants from IIT Delhi's Quality Circle.

HOW TO APPLY

The interested participants are required to send their own filled application in the format enclosed. Preference will be given to those who are already associated with rural industrialization. The nomination must be duly sponsored by the competent authority and mailed to the coordinator. Last date to apply for the course is 15 June 2018. All the selected candidates will be informed through email.
